

**BEAVER
PROBLEMS?**

BEAVER MANAGEMENT SOLUTIONS

ABOUT US

Founded in 1998, Ecotone is an ecological restoration company that designs and builds sustainable ecosystems. Our team of trained and experienced ecologists provide sustainable and efficient beaver management solutions all while allowing beaver to provide ecological benefits. Ecotone also develops watershed restoration strategies that rely on beaver to do the work. Call us today.

WHAT WE DO

Prevent Road Flooding

Installation of flow devices maintains beaver habitat and allows for beaver to co-exist and provide ecological benefits, including water quality and wetland creation, all while maintaining human determined water levels.

Resolve Blocked Culverts

Removing the blockage in combination with flow device and culvert fencing installation allows culverts to function at optimal level while maintaining the ecosystems services provided by beaver. Maintenance is reduced to an annual site visit.

Provide Tree Protection

Inexpensive tree protection fencing installation prevents beaver damage from chewing.

Beaver can be effectively and efficiently managed as a cost-effective alternative to trapping. Call Ecotone today for a free consultation.
